

Digital Teammates

Where Human and Machine Intelligence Work Side by Side

The LumaQuest Advisory Council Platform — Westfield Enterprises, LLC

CONFIDENTIAL — FOR DISCUSSION PURPOSES ONLY

Executive Summary

Ford's Desk, Rebuilt for Every Leader

A century ago, Henry Ford described his secret: a row of buttons on his desk, each connected to an expert. Napoleon Hill called this the **Master Mind**. Over time, the name evolved to the **MasterMind Group**—and came to mean surrounding yourself with the right minds rather than holding every answer yourself.

Westfield Enterprises has rebuilt Ford's desk for the modern leader — and made it available to anyone. Two products carry the idea:

- A configurable **Advisory Council** — a MasterMind Group assembled on demand
- **Digital Teammates** — specialists that actually help run the work

The Timeless Idea: The MasterMind Group

A row of electric push-buttons on my desk — capable people behind each one who could supply any answer I required. — Henry Ford

When Ford was put on trial for lacking formal schooling, he turned the tables. Hill used the moment to define a principle every serious builder already believes: **you don't have to know everything — you have to surround yourself with those who do, and know which button to push.**

The MasterMind Group Went Premium — Then Hit a Ceiling

The MasterMind Group never disappeared — it became a paid privilege. Executives pay handsomely for peer-advisory groups: **Vistage, The Conference Board, YPO**. The demand is proven and durable.

But it runs into hard ceilings. Most leaders — and nearly every smaller operator — are simply priced or scheduled out of the room.

Expensive

Premium memberships cost tens of thousands annually

Calendar-Dependent

Requires aligning everyone's schedules

Rationed

Limited by the scarcest resource — expert time

Two Needs Money Has Never Bought on Demand

Step back and every leader needs two distinct kinds of help — and historically both required hiring or renting scarce human time. **That is the constraint we remove.**

Minds to Think With

Advisors, a board, a MasterMind group — to pressure-test decisions and bring expertise the leader lacks

Hands to Help Run It

A capable team across functions to carry the work: drafting, supporting customers, training staff

The Breakthrough: Human and Machine, Side by Side

The Advisory Council

A configurable board that assembles itself for the question at hand — Ford's row of buttons, available to anyone, without the cost or the calendars. This includes not only the executive team, but also department heads and even the sole proprietor.

The Digital Teammate

High-fidelity specialists that help run the business. Unlike a Digital Twin — chained to one person with legal complications — a Teammate holds multiple personas, specialties, and roles, shifting as needed.

How It's Delivered: Three Pillars

Advisory Council

Configurable master-mind with multi-voice orchestration

The Digital Teammate

WHO personas, HOW modes, WHAT knowledge; legal counsel live, with more coming daily

Knowledge Lifecycle

Teach → Transfer → Support through integrated delivery

One integrated system — not a concept deck. A live teammate already drafts real documents and delivers them through a secure, time-limited pipeline.

Two Markets, One Idea

Large Enterprise

Big companies already have executives — what they lack is advisory support at the **working level**. Department heads and regional managers can convene functional councils tuned to their altitude of authority, democratizing the board of advisors throughout the organization.

Small & Mid-Sized Business

For smaller operators, the platform delivers **reach beyond headcount**: an agentic trainer, a specialized support teammate, and advisory councils on demand — coverage they could never afford to staff.

Why It's Hard to Copy

Teammate, Not Twin

Clean ownership and licensing — none of the human entanglement that chains a digital twin to one person

Voice Orchestration

Purpose-fit rosters and disciplined multi-voice conversation — an engineering discipline, not a single feature

Compounding Knowledge Lifecycle

Teach once, reuse the same expertise to advise and support — value that grows with use

A Working System Today

A live teammate already drafts real documents and delivers them through a secure pipeline — not a concept deck

Status

What Exists Today

Advisory Council

Master system with self-configuring rosters and multi-voice orchestration — live

Legal Counsel Teammate

Two personas (gender & tone specified), three operating modes, specialty modules — fully built

Document Pipeline

Drafts a complete agreement and returns a secure, expiring link — live

The next phase applies this proven architecture to a full roster of additional teammates — built on a foundation that already works.
