

What CTFS Is and Why Module 1

Explain CTFS in one sentence

Name four unified domains

State three top pains

Map persona to key value

CTFS Overview and Value Module 1

Unified, AI-enabled
financial platform

Budgets, contracts,
forecasts, payments

Eliminates fragmentation and manual work

Speeds cycles, improves
accuracy

Lowers total cost of
ownership

Global, multilingual, multicurrency, compliant

Architecture, Governance, First Module Module 1

Architecture

- API-first, webhook orchestration
- Agentic ingestion, forecasting, reconciliation
- Anomaly detection and smart approvals

Governance & First Module

- Audit-ready controls, explainability
- KPI tracking for digital ROI
- First module: Site Payments

Persona Pains and Impact Module 1

ClinOps

Delays, disputes, blind spots

IT

Tech debt, brittle integrations

Site

Chasing, unpredictability, burden

Transformation

Pilots, siloed agents

Value

Unification, transparency, extensibility

Impact

Faster cycles, lower TCO

Individual Practice: Persona Pitches Module 1

01

Craft 35-word pitch: ClinOps

02

Craft 35-word pitch: IT

03

Craft 35-word pitch: Site

04

Craft 35-word pitch: Transformation

05

Map features to persona outcomes

06

Rehearse two discovery openers

Site Payments Learning Outcomes

Module 2

1

Describe CTA-to-invoice automation

2

Explain site portal value

3

Position insourced versus hybrid

4

Articulate dispute reduction levers

From CTA to Cash Module 2

1

Inherit CTA terms automatically

2

Map to verified activity

3

Create compliant invoices automatically

1

Validate with AI checks

2

Centralize status and exceptions

3

Track audit history end-to-end

Site Portal and Global Readiness Module 2

Sponsor-agnostic,
consistent experience

Real-time status and
visibility

Predictable cash flow for sites

Multicurrency and tax
treatment

Localized country
compliance

Drives satisfaction and retention

Operating Models and Outcomes Module 2

Operating Models

- Insourced operations supported
- Hybrid with TES supported
- Scale without adding overhead

Outcomes

- Faster cycle times realized
- Fewer disputes and rework
- Exception detection with AI

Practice and Assessment: Site Payments Module 2

1

Role play: site leader discovery

2

Draft two-line GreenPhire contract

3

Create before-after payment timeline

4

MCQ: invoice creation driver

5

Short answer: portal features

6

Objection: spreadsheets and email

Integration Learning Outcomes

Module 3

1

Explain EDC, CTMS, ERP integrations

2

Position APIs and webhooks

3

Address GxP, GDPR, HIPAA

4

Quantify IT value, TCO

Integration Patterns and Extensibility Module 3

- API-first, standards-based design
- Connect EDC, CTMS, ERP
- Bank integrations for payments
- Webhooks trigger event orchestration
- Connect third-party AI agents
- Extensible, modular SaaS foundation

Compliance and Control Framework Module 3

Audit-ready logs and trails

Role-based access controls

Data retention and lineage

Explainable, validated automation

Supports regulated environments

Data residency considerations

IT Outcomes and Positioning Module 3

IT Outcomes

- Unified workflows reduce exceptions
- No-code configuration speeds delivery
- Lower tech debt, lower TCO

Positioning

- Futureproof via extensible APIs
- Faster deployments, measurable savings
- Avoid vendor lock-in risks

Practice and Assessment: IT Value Module 3

1

Whiteboard data flow verbally

2

Draft six IT questions

3

Answer tech debt question

4

Build integration readiness checklist

5

Scenario: webhooks versus batch

6

True/false: ERP replacement required

ClinOps Outcomes Learning Goals

Module 4

1

Link capabilities to acceleration

2

Explain end-to-end visibility

3

Position AI for exceptions

4

Build simple ROI narrative

Orchestration Capabilities for ClinOps Module 4

- Unified budgeting through payments
- AI processes protocols, invoices
- Detect anomalies, reduce reviews
- Forecasting improves predictability
- Reconciliation aligns across agents
- Global operations, country compliance

Site-Centric Design and KPIs

Module 4

Site-first workflows
simplify tasks

Boost site satisfaction and
scale

Track cycle time reductions

Monitor exception, dispute
rates

Measure on-time payment
percentage

Track total cost of ownership

Individual Practice: ClinOps Value Module 4

01

Map before-after workflow handoffs

02

Estimate ROI from cycle time

03

Draft five ClinOps questions

04

Create 60-second day-in-life

05

Identify three pilot proof points

06

Outline weekly KPI governance

Assessment: ClinOps Mastery Module 4

1

MCQ: global study features

2

Short answer: acceleration KPIs

3

Scenario: complex CTA exceptions

4

Match capability to outcome

5

Submit to teaching agent

6

Capture improvement actions

Positioning learning outcomes

Module 5

1

Deliver persona-specific positioning

2

Differentiate versus point solutions

3

Build measurable pilot plan

4

Create mutual action plan

Differentiators and pilot approach Module 5

Platform Differentiators

- Unified suite beats point tools
- Agent-ready orchestration advantage
- Global readiness and governance
- Open, modular, scalable platform

Pilot Strategy

- Start with Site Payments pilot
- Expand forecasting, reconciliation next

Practice: advance opportunities Module 5

Handle objections, secure pilot

Write six-step mutual plan

Draft pilot follow-up email

Build Why CTFS now slide

Define entry, exit criteria

List risks and mitigations

Assessment and assumptions review Module 5

01

MCQ: Medidata differentiation angle

02

Scenario: minimum viable pilot

03

Short answer: sponsor ask

04

Match objection to response

05

Review SME validation assumptions

06

Confirm next-step commitments
